## Declaration concerning Formaldehyde – CARB II

The California Air Resources Board (CARB) has in its “phase 2 emission standards” limited the formaldehyde emission to a maximum value of 0.05 ppm. This value is equivalent to one half of the European E1 value.

We are hereby confirming that the Rover's Flooring Ltd – Twin-Plank flooring does not contain formaldehyde. Because of this the adhesives fulfil the CARB II regulation.

Please be aware that the adhesives which Rover's Flooring is using are isocyanate-based binders, used in the chipboard industry to substitute formaldehyde-based binders (i.e. UF resins) with the aim to reduce formaldehyde emissions.

Jowatherm Reaktant 605.20 and 605.25 are isocyanate-based binders and are therefore well suited to substitute UF resins.

Twinplank is produced in Germany and conforms to the strictest European Production norms.
